

Drones & flight models

Please refer to the following document for all relevant requirements:

[NfL – 2021-1-2389 UAV](#)

You require a telephone clearance for ascents in the control zone (CTR) of the special airport Oberpfaffenhofen.

To receive the telephone numbers of the EDMO Tower, please write a short e-mail to tower@edmo-airport.de. (Please register at least 1 day in advance)

Please note that an air traffic control clearance must be obtained by telephone from the control tower at Oberpfaffenhofen Special Airport (EDMO Tower) immediately before commencing flight operations..

The following information is required to obtain approval:

- Planned period off light operations
- exact ascent point
- Maximum ascent height (max. 120m according to the enclosed general permit)
- Mobile phone number of the contact person on site

Depending on the prevailing air traffic and weather conditions, the air traffic controller on duty decides whether to issue an air traffic control clearance, if necessary with additional restrictions (e.g. max. ascent height 30m).

If you cannot reach the EDMO Tower by telephone, it can be assumed that flight operations at Oberpfaffenhofen Special Airport have ended and the control zone has been deactivated. In this case, please contact the local security center on 08153/8817 - 742.

You must be reachable by telephone at all times during the flight in order to clarify any changes at short notice.

The end of your drone ascent must also be reported to the EDMO Tower by telephone, if available.
